

HEAVY INDUSTRIAL Demolition

| Dickinson Group of Companies' Demolition Division was established in 1995 as a Member of Dickinson Group of Companies and are a leading provider of Heavy Industrial Demolition.

| HEAVY INDUSTRIAL DEMOLITION

Dickinson Heavy Industrial Demolition is a leading provider of specialist furnace, heavy industrial and confined space demolition services. The company has over the past 20 years gained an outstanding reputation for undertaking demanding demolition projects in Sub-Saharan African, with an extensive client base in the mining, metals smelting, mineral processing, industrial and construction sectors.

The company has modern, advanced and purpose-designed mechanical demolition equipment, capable of meeting the challenges posed by large, demanding demolition projects. The up-to-date technology and methodologies used substantially reduce the man hours required and improve the safety profile of projects. To ensure increased efficiency, cost effectiveness and improved safety the company has invested in high powered crawler excavators fitted with high speed hydraulic breakers, to supplement the remote controlled Brokk demolition machines and materials handling equipment.

The company utilises the high powered crawler excavators fitted with hydraulic breakers as well as state-of-the-art Brokk remote controlled machines, enabling the operator to move freely and work at a distance in the case of hazardous operations, which ensures maximum safety and efficiency. The electrically powered Brokk demolition machines are extremely versatile, with small outer dimensions, low weights and high power-weight efficiency, they are able to operate in confined, hot and difficult conditions. The use of mechanised methods to execute the demolition reduces downtime of production units, ensuring cost effective execution of the works.
